Project 1: Bitcoin Mining

Program run directions

☐ Unzip 'Project1'

☐ For Server:

o cd into 'Project1_Server'

o run the following command

sbt "run 4" –vm –Dakka.loglevel=WARNING

☐ For Client(s):

o cd into 'Project1_Remote'

o run the following command

sbt "run 127.0.0.1" –vm –Dakka.loglevel=WARNING

Note: start server before starting the client

Size of Work Unit

The work range is not specified by the master when a worker starts mining bitcoins. A worker creates a string at random, pushes it into sha256 hash and checks for leading zeroes for the returned string. It reports back to the master after collecting a chunk of bitcoins. After the timer expires the workers and master automatically stop.

Result of running program for k = 4

CPU time versus real time for the above input

User CPU time: 918.119 secs

System CPU time: 11.819 secs

Real Time: 2:08 mins

Performance: 724.5%

Coin with most zeros found : 6

Largest number of working machines : 3
